

### LISTING OF CLAIMS

This listing of the claims replaces all prior versions, and listings, of claims in the application:

1. **(Currently Amended)** A wireless communications device comprising at least two distinct communications capabilities configured for use in a wireless network, the wireless device comprising:

at least one processor for controlling operation of the at least two communications capabilities;

a first input device coupled to the at least one processor for accepting an input;

at least one display device coupled to the processor for communicating an output;

a communications subsystem coupled to the at least one processor for communicating with the wireless network;

a memory coupled to the at least one processor; and

a storage device coupled to the at least one processor; ~~and~~

the memory having processor-executable instructions that, when executed by the processor, causes the processor to implement a user interface for controlling the operations of the wireless communications device, the user interface including:

~~configured to provide~~ at least one main screen adapted for invoking a plurality of applications, the plurality of applications comprising applications for controlling the at least two communications capabilities; and

~~, the user interface further including a~~ at least one component to compose a destination for an outgoing communication generated by a respective one of the at least two communication capabilities of the device, said component providing simultaneously together:

a prompt defining a field for receiving the destination as text; and

a hot list of candidate destinations selectable at the user interface and usable as the destination;

wherein the at least one main screen comprises an application portion displaying ~~one or more application icons~~ at least one application icon operable to invoke the plurality of applications, at least two of the communication capabilities being invocable via selection of a respective one of the at least one application icon, and a mobile status portion[[]]; and

wherein the at least one component to compose a destination for a respective one of the at least two communication capabilities is invocable from the main screen via selection of the application icon for the respective communication capability ~~manually by activating a communication application icon~~ and ~~automatically~~ is also invocable in response to an alphanumeric input from the first input device of a portion of the destination, the component to compose a destination being invoked depending on the type of alphanumeric input.

2. **(Previously Amended)** The wireless communications device of claim 1, wherein the first input device is a key-based input device to input the destination.

3. **(Cancelled)**

4. **(Currently Amended)** The wireless communications device of claim 1 wherein the destination is a telephone number to be called and the input is a portion of [[a]] the telephone number, wherein the input of the portion of the telephone number invokes a component to compose the destination for a telephone communication capability.

5. **(Previously Amended)** The wireless communications device of claim 1 wherein the portion of the destination populates the prompt when the component to compose a destination is invoked.

6. **(Currently amended)** The wireless communications device of claim 1 wherein the component to compose a destination is invocable in response to at least one of: an interaction with a ~~home~~ main screen component of the user interface from which to invoke a ~~feature~~

communication capability from among a plurality of ~~features~~ communication capabilities provided by the wireless communications device; and an auxiliary input device.

7. **(Currently amended)** The wireless communications device of claim 1 wherein the component to compose a destination is further invocable in response to at least one of: an interaction with the ~~home~~ main screen component of the user interface; and an auxiliary input device.

8. **(Original)** The wireless communications device of claim 1 wherein the component to compose a destination is enabled to move between the prompt and hot list.

9. **(Original)** The wireless communications device of claim 1 wherein the component to compose a destination is adapted to provide a filtered list of destinations from a store of destinations on the device in response to a filter input received at the user interface, said filtered list selectable at the user interface to choose a destination.

10. **(Original)** The wireless communications device of claim 1 wherein the prompt is adapted to permit navigating and changing the destination while composing.

11. **(Original)** The wireless communications device of claim 1 wherein the component to compose a destination is adapted to provide at least one action button for terminating composition of the destination.

12. **(Currently Amended)** In a wireless communications device comprising at least two distinct communications capabilities configured for use in a wireless network, a method for composing a destination for an outgoing communication generated by the device comprising:

providing a main screen comprising an application portion displaying ~~one or more application icons~~ at least one application icon operable to invoke a plurality of applications, the plurality of applications comprising applications for controlling the at least two distinct communications capabilities, and a mobile status portion, the applications for controlling the at least two distinct communications capabilities each comprising a respective composition screen, the at least one application icon ~~one or more application icons~~ comprising ~~[[a]]~~ at least two communication application icons

for invoking the respective composition screen of a respective communication capability;

invoking one of the composition screens from the main screen ~~automatically~~ in response to an alphanumeric input of a portion of the destination, the composition screen invoked being dependent on the type of alphanumeric input;

providing the composition screen;

providing, simultaneously with the composition screen, a prompt defining a field for receiving the destination as text; and

providing, simultaneously with the composition screen, a hot list for selecting the destination, the hot list comprising candidate destinations selectable as destinations.

13. **(Original)** The method of claim 12 including:

receiving the destination using the prompt in response to a key-based input.

14. **(Cancelled)**

15. **(Currently amended)** The method of claim 12 wherein the destination is a telephone number to be called and the input is a portion of the telephone number, wherein the composition screen for a telephone communication capability is invoked.

16. **(Previously Amended)** The method of claim 12 comprising populating the prompt with the portion of the destination.

17. **(Cancelled)**

18. **(Original)** The method of claim 12 comprising moving between the prompt and hot list in response to navigation about the composition screen.

19. **(Original)** The method of claim 18 comprising receiving the destination selected from the hotlist and generating the outgoing communication in response.

20. **(Original)** The method of claim 13 comprising providing a filtered list of destinations from a store of destinations on the wireless communications device in response to a filter input at the user interface, said filtered list selectable to choose the destination.
21. **(Original)** The method of claim 12 comprising receiving the destination and generating the outgoing communication in response.
22. **(Original)** The method of claim 12 comprising providing a cursor adapted for use in navigating and changing the destination while composing.
23. **(Original)** The method of claim 12 comprising providing at least one action button for terminating composition of the destination.
24. **(Currently Amended)** A computer program product having a computer readable medium tangibly embodying computer executable code stored thereon for composing a destination for an outgoing communication generated by a wireless communications device comprising at least two distinct communications capabilities for use in a wireless network, said computer program product comprising:

code for providing a main screen comprising an application portion displaying ~~one or more application icons~~ at least one application icon operable to invoke a plurality of applications, the plurality of applications comprising applications for controlling the at least two distinct communications capabilities, and a mobile status portion, the applications for controlling the at least two distinct communications capabilities each comprising a respective composition screen, the at least one application icon ~~one or more application icons~~ comprising ~~[[\*]]~~ at least two communication application icons for invoking the respective composition screen of a respective communication capability;

code for invoking one of the composition screens from the main screen ~~automatically~~ in response to an alphanumeric input of a portion of the destination, the composition screen invoked being dependent on the type of alphanumeric input; and

code for the composition screen providing simultaneously together:

a prompt defining a field for receiving the destination as text;

a hot list usable for selecting the destination, the hot list comprising candidate destinations usable as the destination.

25. **(Previously presented)** The wireless communications device of claim 1, wherein the at least two distinct communications capabilities comprise a voice capability and a non-voice capability.

26. **(Previously presented)** The method of claim 12, wherein the at least two distinct communications capabilities comprise a voice capability and a non-voice capability.

27. **(New)** The wireless communications device of claim 1, wherein the destination is an email address and the input is a portion of the email address, wherein the input of the portion of the email address invokes a component to compose the destination for an email communication capability.

28. **(New)** The method of claim 12, wherein the destination is an email address and the input is a portion of the email address, wherein the composition screen for an email communication capability is invoked.
